

Circular and sustainable economy

Between tradition, modernity and performance.

I was born in a small village in the Pyrenees full of traditions and naturally respectful of nature.

I saw the swallow population reduce just like that of sparrows.

I now live in Auvergne. The forest next to my house is dying ...

The return to a sustainable circular economy is a vital need.

Without any dogmatism, I draw from traditions and modernity what seems to me the best way to build lasting happiness.

The economy must be based on use and not on consumption, wear and tear, obsolescence or waste. It must revolve around the quality, the value of the materials and the techniques used.

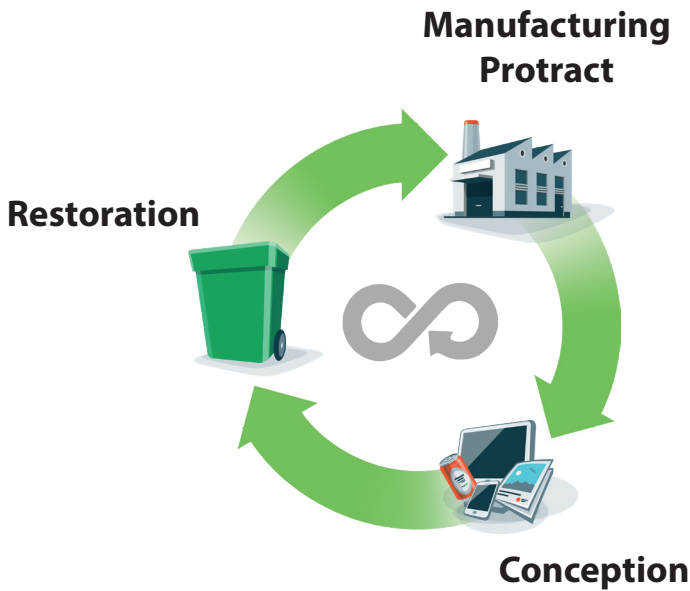

It is based on respect for natural resources and sharing.

My grandmother, a very modest income woman, was part of the **generation of those who threw nothing away and recycled everything.**

The products I design are made to last and be passed down from person to person and from generation to generation.
